

Quiz — Day 2

- 10–12 short questions
- Concepts: parsing, SQLite, getters, validation

Sample Questions

1. What's the advantage of NAPALM getters over TextFSM?
2. How do you validate a JSON file from the CLI?
3. Which Python module is used to write to SQLite?
4. How do you default labs to offline fixtures?
5. What's an exit code that signals success?

Discussion

- Review any confusing outputs
- Clarify normalization strategy
